

How I'm trying to get more useful work from my ChatGPT dot

Private editorial draft for owner review

Conceptual illustration informed by official ChatGPT dots artwork. The product character represents the topic, not my personal dot or a live product screen.

Give it a responsibility that outlasts a task

The next decision should arrive before I ask

Work + the next decision

Proposed coordination design

LOOK AHEAD IN PARALLEL

While work runs or awaits review, prepare independent next proposals. Approval pending? Surface ready choices that unlock capacity. Dependent work still waits for the owner's answer.

ONE ASSIGNMENT WITHIN THE ONGOING OBJECTIVE

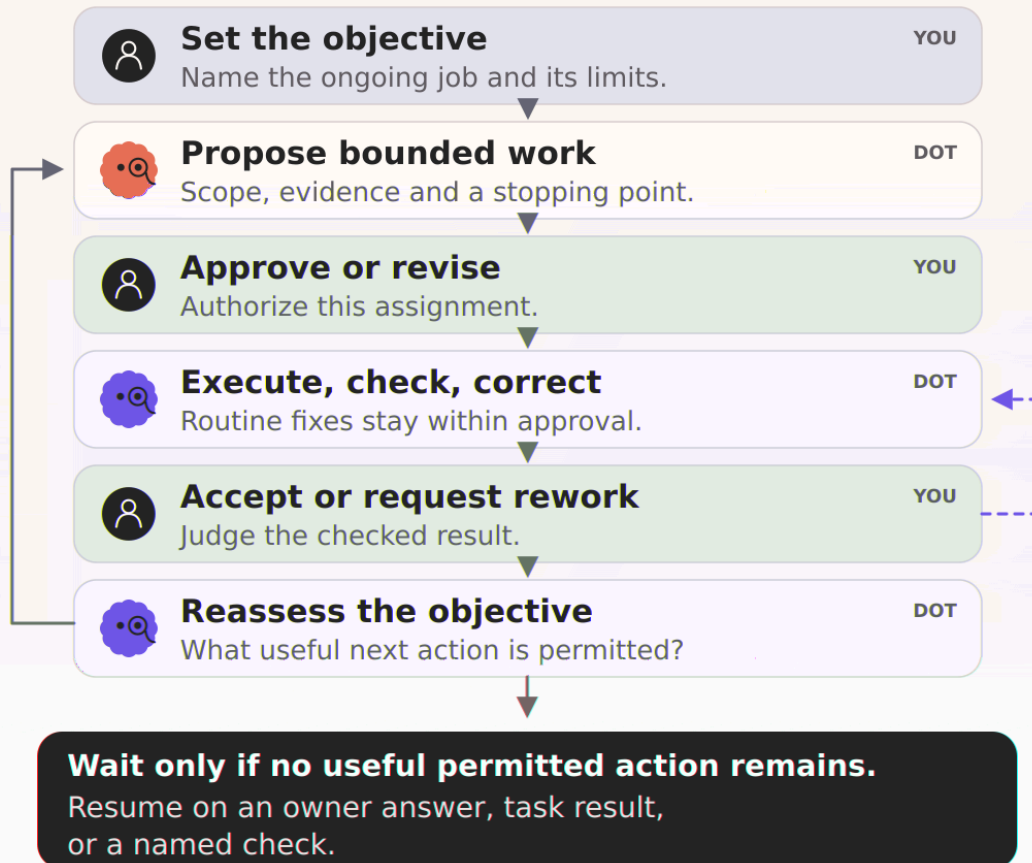

Figure 1. One assignment sits inside an ongoing coordination loop. While work runs or awaits review, prepare independent proposals and surface ready decisions. Rework stays within approval; wait only when no useful permitted action remains, with a named resumption event.

Make f

Recover from confirmed state

Proposed recovery design · Attempted ≠ verified

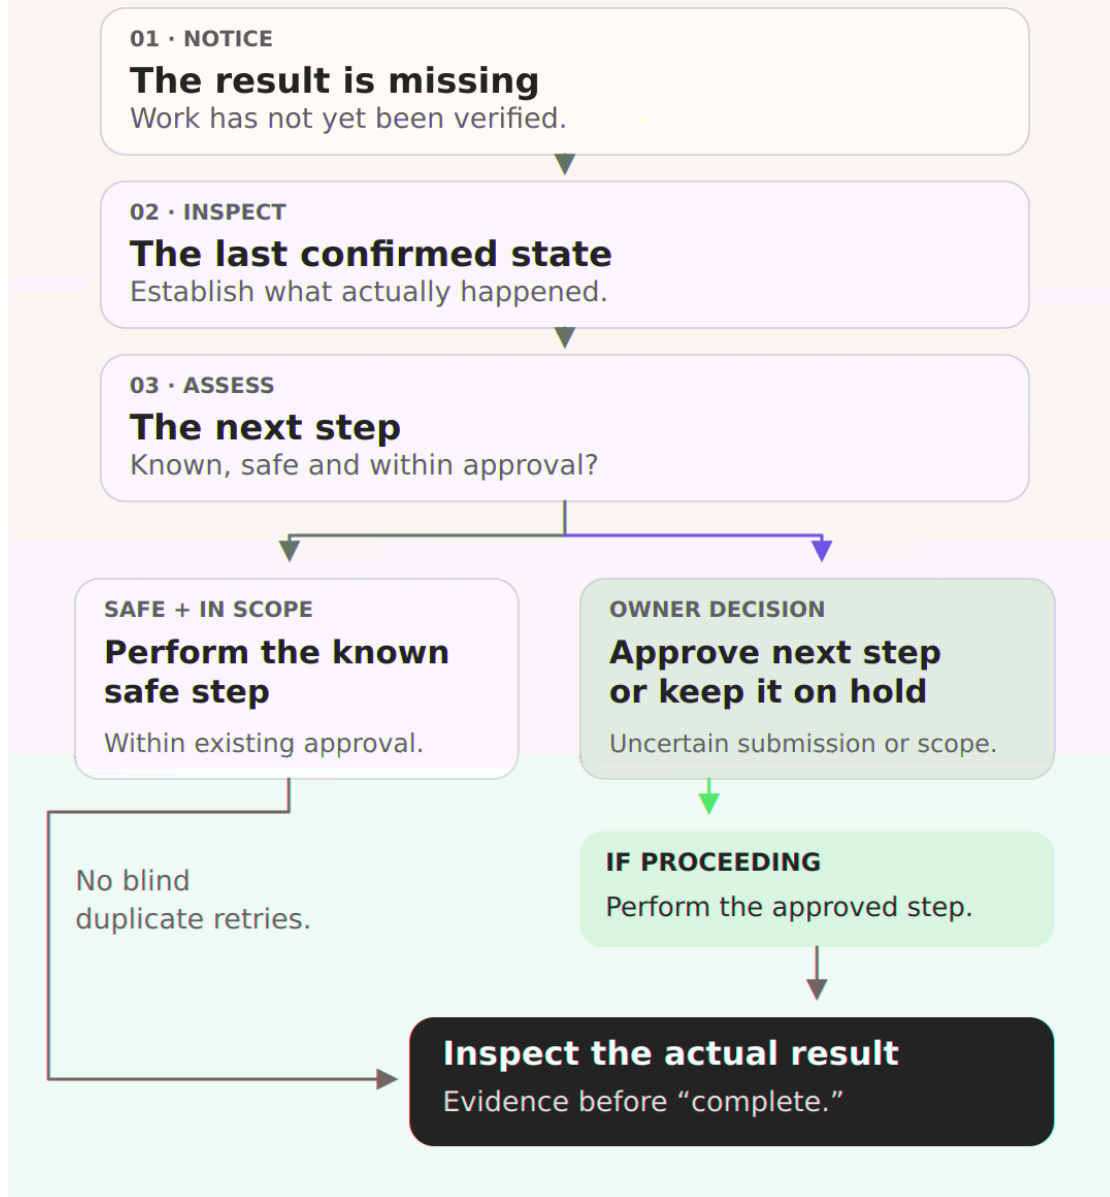

Figure 2. Know where the work stopped. Resume a known safe, in-scope step; seek an owner decision if a consequential submission remains uncertain or scope must change. The owner can approve the next step or keep it on hold. If proceeding, perform the approved next step, then inspect the actual outcome before marking the work complete. Never blindly repeat a submission.

Measure how much coordination comes back to me

Start with one ongoing job
